

Hi, I'm Cecilia Tapia, with the U.S. Environmental Protection Agency Region 7. My colleagues and I are responsible for EPA's Superfund work at the West Lake Landfill Site in Bridgeton, Missouri. EPA is making sure that contamination at West Lake doesn't threaten your health and safety.

Please join me to hear EPA's latest information about West Lake at a public meeting on Tuesday night, June 25, at Pattonville High School in Maryland Heights, Missouri. The school is located at 2497 Creve Coeur Road, and the meeting starts at 6:30 p.m.

If you'd like to know more about radiation, groundwater sampling, health concerns or other issues related to West Lake, plan to join us at this meeting. You may also want to know how EPA's work at West Lake is related to work being done by the operators of the adjacent Bridgeton Landfill to control odors and underground smouldering. We'll tell you how EPA is working with the State of Missouri to keep the smouldering at the Bridgeton Landfill from reaching contaminated areas at West Lake.

For more information about this meeting, and about EPA's work at the West Lake Landfill Site, visit our website, www.epa.gov/region7, and click on the link for West Lake Landfill.

Thanks for your time. We look forward to seeing you on June 25, and answering your questions.
